Cross-Sections of Cuts Resulting from Differences in Structure

The typical nippers have a double-edged structure where as you apply grip, both edged blades clamp down and simultaneously cuts into the target. The marks left from the cut are, as a result, near the center of the cross-section, thus making them very noticeable.

In the case of the single-edged structure, as the cuttingboard-edge is flat and not sharpened, only the edged blade slices into the target. The resulting cut marks will concentrate near one side of the cross section and are less noticeable.

Double-Edged Structure

The double-bevelled edges simultaneously cuts into the target

Target

Cutting edge

As you apply grip...

The cut completes near the center

The stress marks are left near the center of the cross-section.

Single-Edged Structure

The single bevelled cutting edge cuts into the target

Target

Cutting edge

Receiving edge (cuttingboard edge)

As you apply grip...

The cutting edge slices all the way through

The stress marks are near the edge of the cross-section.

NIPPER/PLIER

Single-Edged Structure

For Plastic Only

GH-PNS-135

Single-Edged Nipper Stainless

Durable and easy to handle!
Rust resistant, perfect for single-edge beginners!

Single-Edged Structure

For Plastic Only

GH-PN-95-M

Nipper cap included

Blade One Mini

Small single-edged nippers!
fits perfectly in smaller hands!

Double-Edged Structure

For Tape Only

GH-SMN-125

Nipper cap included

Masking Tape Nipper

Think masking off is arduous?
With this it's a piece of cake!
For tapes up to 12mm wide

Single-Edged Structure

For Plastic Only

GH-SPN-120

Nipper cap included

Ultimate Nipper 5.0

Single-edged nippers with ultra thin blade for the ultimate cutting experience!!

Cutting Capacity
Dia. 3.0 mm for PS/PP/ABS/PE resins
*Dia. ≤ 1mm for transparent or translucent PS resin

Single-Edged Structure

For Plastic Only

GH-PN-120

Nipper cap included

Blade One Nipper

Our standard single-edged nippers
with balanced performance.

Single-Edged Structure

For Plastic Only

GH-KPN-95

Nipper cap included

Kids Nipper EX

Make model building fun!
Single-edged nippers designed
with kids in mind!

Double-Edged Structure

For Metal Only

GH-SWN-125

Nipper cap included

Metal Wire Nipper

Metal only nippers capable of
cutting metal wires 0.042-2mm
in diameter!!

Double-Edged Structure

For Plastic Only

GH-SG-01

SG Standard Nipper

New to plastic modeling?
We got you sorted!
Easy for anyone to use,
just one pair will simplify
your work!

Kamiyasu Sanding Sticks / Kamiyasu MIGAKI

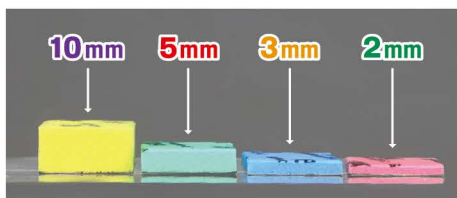

Sanding sponges with outstanding usability!

These sanding sponges incorporate highly durable fabric sandpaper. Since fabric is used as backing, they offer versatility for various situations such as the shaping and processing of curved and flat surfaces. They are available in a line up tailored to different applications, compatible for a wide range of scenarios.

Comes in several thicknesses.

Comes in 2mm, 3mm, 5mm, and 10mm thick. Each thickness has its own unique properties, and are suitable for a wide range of sanding/filing work.

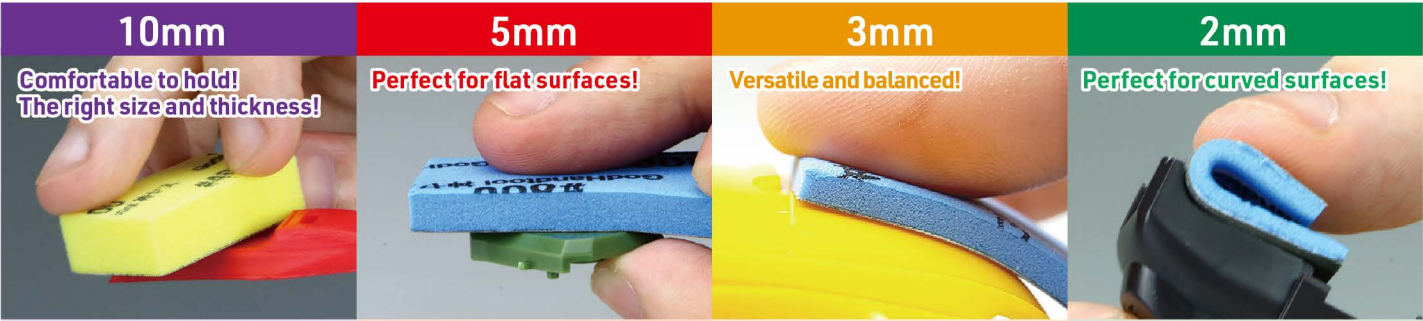

Cut to desired size

Bend and fold to work on curved surfaces

Tough enough to be handled with tweezers

Kamiyasu Sanding Sticks Assortment Set

■ Assortment sets containing 3 grit numbers of the same thickness. Set A contains grits suitable for sanding down putty material, while Set B contains grits suitable for sanding work on plastic model materials.

GH-KS10-A3A	GH-KS10-A3B	GH-KS5-A3A	GH-KS5-A3B	GH-KS3-A3A	GH-KS3-A3B	GH-KS2-A3A	GH-KS2-A3B

GH-KSC2-KBA	#2000, #4000, #6000 (1 piece each)		3
GH-KSC2-KBB	#8000, #10000 (1 piece each)		2

Depending what it's pasted on to, you can do things such as...

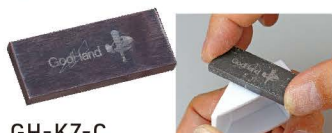

Kezuru Blade

Works in all directions. Removing material is quick and easy!

GH-KZ-A

Kezuru Blade - Coarse File

GH-KZ-C

Kezuru Blade - Medium File

GH-KF-5-S

KAMABOKO File - 5mm Single Cut

Since the arched surface is not cut, you can avoid damaging the adjacent surface when sanding inside corners!

Grit : fine

GH-IY-M

Mini Metal File

Highly versatile and user-friendly, suitable for anyone to handle as they please!

Grit : fine and medium

GH-ES-90

Edging File

Make your work stand out with sharper edges!

GH-NY4

Emery Cloth Set

Made of tough fabric that is hard to tear!

P240 / P400 / P600 / P800

Kami Paper

Durable sandpaper that can be used on their own.

GH-KY-4A

Kami Paper A

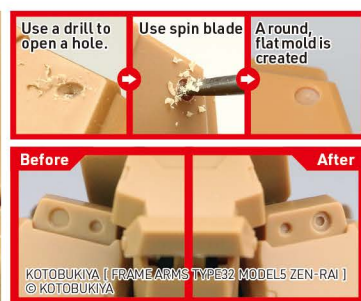

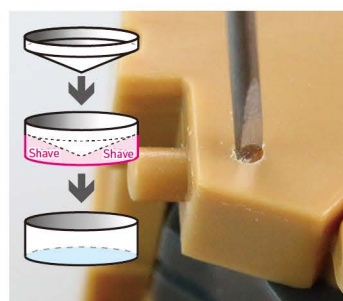

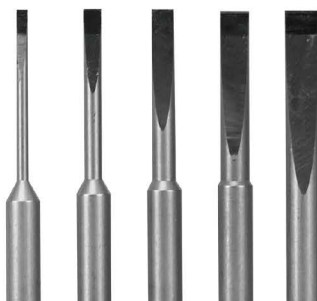

GH-KY-4B

Kami Paper B

PIN VISE/BIT

Spin Blade

Spinning chisel tool!
For detail modifications.
By using with drills,
you can easily
make flat molds!

Product Name	Product Code	Shank Dia.	Contents
Spin Blade Set of 5	GH-SB-1-3	3mm	1.0mm/1.5mm/2.0mm/2.5mm/3.0mm

Drill Bit

Drill bits designed specifically
for model building!
Drills in smoothly with the
added cutting edge
at the tip of the bit.

Length is tailored for ease of use with a pin vise (graphic right). A long shaft can cause one to miss the intended target. While a shorter shaft and drill makes it easier to focus on the targeted area and drill with more precision.

Product Name	Product Code	Shank Dia.	Contents
GodHand Drill Bit Set of 5 A	GH-DB-5A	3mm	0.5mm/0.6mm/0.7mm/0.8mm/0.9mm

Brushwork

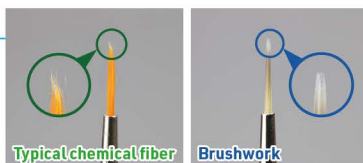

Brushwork PRO

Paint Compatibility : Water based / oil based / lacquer / polyurethane Brush cap incl.

Brushes meticulously dedicated to hand painting model builders.

Delicate crafted bristles

Brushwork use Japan-made artificial hair (PBT) with an emphasis on desired flexibility and stiffness. The bristles themselves are made by paint brush artisans and are put together hair by hair.

Typical chemical fiber

Brushwork

Compatible with solvents

Organic solvents will damage animal hair, causing them to tear and frizzle up. Brushwork brushes are more compatible with solvents, the hairs do not fall off easily and the bristles stay in good condition for longer.

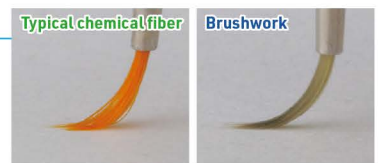

Animal hair bristles

Brushwork

Pliable and flexible

We chose a flex most suitable for brush painting, the bristles are flexible and more pliable than chemical fiber brushes.

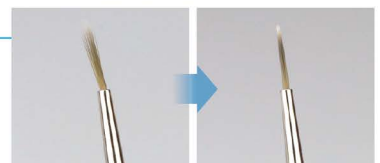

Typical chemical fiber

Brushwork

Bent bristles can be restored

Using specially processed PBT bristles, even hairs bent from the base can be restored to its original shape using hot water (90°C or above). ※ If the bristles are at the end of their lifespan, they may not recover.

GH-BRSP-MS / GH-BRSP-MM / GH-BRSP-ML

Point Brush S/M/L

S For ultra fine detailed painting such as the iris of a figure

M For ultra fine ~fine detailed painting such as the accessories of a figure.

L With an even sharper tip, this brush is great for creating thin lines and markings

Brush tip length 5mm

Brush tip length 6mm

Brush tip length 8mm

GH-BRSP-GMS / GMM / GML

Fine Point S/M/L

A brush perfected for precision, targeting even the most intricate and hidden tiny areas with accuracy.

Brush tip length 6mm
